

GompaTech Foundry Intelligence

Stop SOP Deviations Before They Become Customer Rejections

Real-time monitoring of critical foundry processes using sensors, cameras and AI. Detect deviations instantly, alert operators before pouring, and automatically build digital traceability.

Key Benefits

- Prevent defective castings
- Faster RCA with timestamped evidence
- Improve audits and traceability
- Recover production capacity
- Build digital maturity

How it works

1. Install at critical process points.
2. Monitor every heat automatically.
3. Instant alerts and permanent records.

Why GompaTech?

Validated in a 4-month live pilot at an MP foundry. No dedicated operators. Minimal disruption. Start with one process and scale.
